

# Award of Excellence

**Project:** Flagler Streetscape Project

**Category:** Best Practice

**Applicant:** Miami Downtown Development Authority

**Customer:** City of Miami Office of Capital Improvements.

The project aims to spur investment in the Flagler Street in Downtown Miami through a complete and thoughtful reconstruction of the street into a more pedestrian oriented “main street” that would encourage greater outdoor dining, activate use of upper floors, and allow for regular street festivals and events.

The Jury applauds the DDA’s two-pronged approach to consensus building and funding, creating an unprecedented public/private partnership which leveraged \$13M for construction costs.

BCC Engineering is serving as Project Manager and Engineer of Record for the redevelopment of historic Flagler Street in Downtown Miami. Project design consisted of a “Complete Streets” approach creating a pedestrian-friendly retail destination that incorporates on-street cafes, widened decorative sidewalks, shade trees, and many hardscape amenities.

Flagler Street – Downtown Beautification Project, Developed in collaboration with Architect partner Curtis + Rogers Design Studios

Recipient of the American Planning Association Award of Excellence  
in recognition of a unique collaborative process and economic development strategy.
